

GETTING STARTED

Helpful tips for your Sprout project

1

LAUNDER YOUR PROJECT

Before you cut out your pieces, wash your Sprout project with phosphate free detergent on a warm or cool delicate setting. Dryer? Use a low setting. This serves two purposes. First, your fabric will soften up (it can sometimes be a bit stiff from the printing process). Second, since we add shrinkage compensation to every Sprout project, once you wash it, it should be the correct size per the pattern's size chart.

2

CUT OUT PIECES ON THE BLACK LINES

Use the black lines to cut out your project. We have already added the seam allowance (check the instructions for the measurement that particular pattern calls for) inside the black lines. The white areas are simply margins for you to see the lines clearly.

3

LABEL PATTERN PIECES

To keep organized with your project, you can simply cut out the labels printed on the pattern and pin them to their corresponding pieces.

Happy Sprouting!
